

M-Box

Your compressed air network auditor

M-Box creates a week-long 24/7 profile of your production air requirements and cost. During the audit you operate normally and our M-Box data loggers record the activity of your compressors. You receive a detailed report with your compressor scope of supply, data pages (including power and air consumption, load cycles, running hours, etc.), profile graphs and charts, and an executive summary. This report will include recommendations on how to run your compressed air system more efficiently.

- Feeding cable from the compressor ①
- Data logger ②
- Flash card ③
- Standard AA batteries ④

FEATURES

- Compressors do not need to be turned off; production can continue
- Suitable for all brands of air compressors
- Records hard data based on actual measurements of your air compressor in use
- Plots simulations using your data to show benefits of upgrading to new technology
- Projects payback periods to justify a cost-saving capital investment
- Provides professional audit/profile reports

BENEFITS

- Discover exactly where improvements in the compressed air system can reduce operating costs
- Efficiently match supply to demand, to optimise profitability of operations
- Obtain reassurance that your compressed air system is running efficiently

O-Box

Quick and handy air quality indicator

O-Box enables an Atlas Copco sales representative to measure the oil content in your compressed air network quickly and easily, then instantly provide the results in a visually attractive report. Within a few minutes the impactor capsule gives a clear indication of your air quality with no changes to your installation required. The Obox will highlight any air quality issues, which the sales representative will be happy to address.

- Impactor 1
- Orifice 2
- Adaptor 3
- Push-in coupling 4
- Sealing cord 5

FEATURES

- Detects oil aerosols from 0.1 to >1 mg/m³
- Detects all kinds of oil, including synthetic oil
- Suitable for all brands of air compressors

BENEFITS

- Discover the air quality of your compressed air network and receive advice from an Atlas Copco expert
- No complex test installations
- Results and report available instantly (3 minutes)
